- Source FrameworkModuleIdentity table

Module library

Every Framework module identity SubZero can recognise, grouped by where it lives — and the slot kinds that describe each placement. Select any module to inspect it.

USB-C FrameworkModuleIdentity · UsbCExpansionCard

- Expansion-card slot
- USB4
- Hot-swappable

Raw USB4 port with up to 100 W Power Delivery and DisplayPort alt-mode — the most capable card.

2 modules

Unknown USB-C occupant

USB-C port

None

None

Slot kinds

FrameworkModuleSlotKind

Where a module sits. The selected module's kind is highlighted below.

None

1×

No module present in this position.

USB-C port

1×

A raw USB-C / USB4 port exposed directly by the mainboard.

Expansion-card slot

10×

A Framework expansion-card slot fed by a USB-C port.

Input deck · top row

4×

Top input-deck position — keyboard, numpad, LED matrix or spacer.

Input deck · touchpad

1×

The touchpad position within the input deck.

Expansion bay

8×

Rear/under bay for GPU, storage or fan interposers.

Internal · fixed

8×

A soldered or permanently fixed internal device.

Detached

state

Module is known to the system but currently removed.
